

AT01: Successful user registration

Preconditions:

- The customer is NOT logged in.

Test scenario:

Action	Expected result	Execution correctness
ActionExpected resultExecution correctnessChoose the register option located in the main menu on the left-hand side.	The system presents the registration form.	PASS
Provide valid registration data, ensuring the Name contains only letters and the first and last words start with an uppercase letter.	The system creates a new account and displays the login form.	PASS

AT02: Failed registration attempt after inputting incorrect or missing data

Preconditions:

- The customer is NOT logged in.

Test scenario:

Action	Expected result	Execution correctness
Choose the register option located in the main menu on the left-hand side.	The system presents the registration form.	PASS
Provide registration data, but input a password and a repeated password that do not match.	The system informs the user that passwords don't match by displaying the message "Passwords don't match!" and returns to the data input step.	FAIL
